

DeNet company took a part in the World Economic Forum in Davos

23-26 January, Davos: DeNet company took a part in the World Economic Forum in Davos, which engages the foremost political, business and other leaders of society to shape global, regional and industry agendas.

"Davos is a great place to meet up and communicate, this year you could feel that entire economic forum was feeling the aftershocks that cryptocurrencies and blockchain technology have caused throughout the economies of the world. We even sat in on a meeting with Arkaday Dvorkovich who is a well-known Russian economist and a top state official. More than half of the questions and the discussions were about cryptocurrencies and blockchain. Major crypto miners and representatives of established I,T. companies were in attendance as were several startups. We discussed possible terms of cooperation between those respective companies and DeNet." – says Rafik Singatullin, CEO DeNet.

DeNet and its concept of a decentralized network for storing, hosting and computing is getting a lot of interest and the right kind of attention from almost everyone, since it is such an accessible product and can bring practical benefits to a wide range of users.

During the WEF DeNet team met up with a living legend, Dr. Alex Konviser of the Internet AG global network with whom DeNet gave a joint television interview and discussed the product. It is worth mentioning, that the DeNet team added Kirill Nikolaev, Co-Founder of NICA Multi Family Office, and founder of Bitcoin VIP as adviser. Kirill is a successful IT entrepreneur, board member of the company VIMANA Global - the leading project in the field of autonomous aerial vehicle flight routes in smart cities all over the world.

"DeNet is not just another ambitious project, these guys have an understanding what exactly has to be done to succeed. There are very few projects with the same idea, but none are developing decentralized hosting including cloud computing based on such a distributed system. So, I think that DeNet has great potential to become a leader in the global market within a few years", - says Kirill Nikolaev.
